Generate Clean Energy from the Sun to light up the classroom with **iSolar Power Systems.**

Learn about Solar energy and the environment with the **iSolar Bright Future Schools Programme**

# *Integrated Learning*

## ***Our Mission***

*“To inspire action against global warming and embrace sustainable living for a bright future”*

## **iSolar ‘Bright Future’ *Schools Programme***

Learn about global warming, solar electricity and sustainable living through an inquiry based learning programme.

Scientifically investigate the development of solar power with your very own system.

Explore solar power’s variety of uses and its benefits to the environment with a complete range of learning tools and materials for teachers and students.

By developing bright minds with bright ideas, we’re building a *‘Bright Future.’*

### Why Use Solar Power?

Solar power is the cleanest, most viable form of renewable energy available to help power your school.

Australia receives enough solar energy each day to power every home, school and business in the country. Now the decision to switch is made even easier with the federal and state government rebate programmes.

### How it Works

iSolar Power Systems allow your school to plug into the sun and convert sunlight into electricity to be used in the classroom.

We also offer a range of options that integrate learning and promote sustainable energy.

### iSolar Systems

We use the latest in BP Solar technology and provide a complete service to help you choose the best solar system for your school needs. We also take care of all the paperwork to help your school receive the maximum government rebate.

All BP Solar Panels come with a 25 Year Power Performance Warranty.
